# Overview

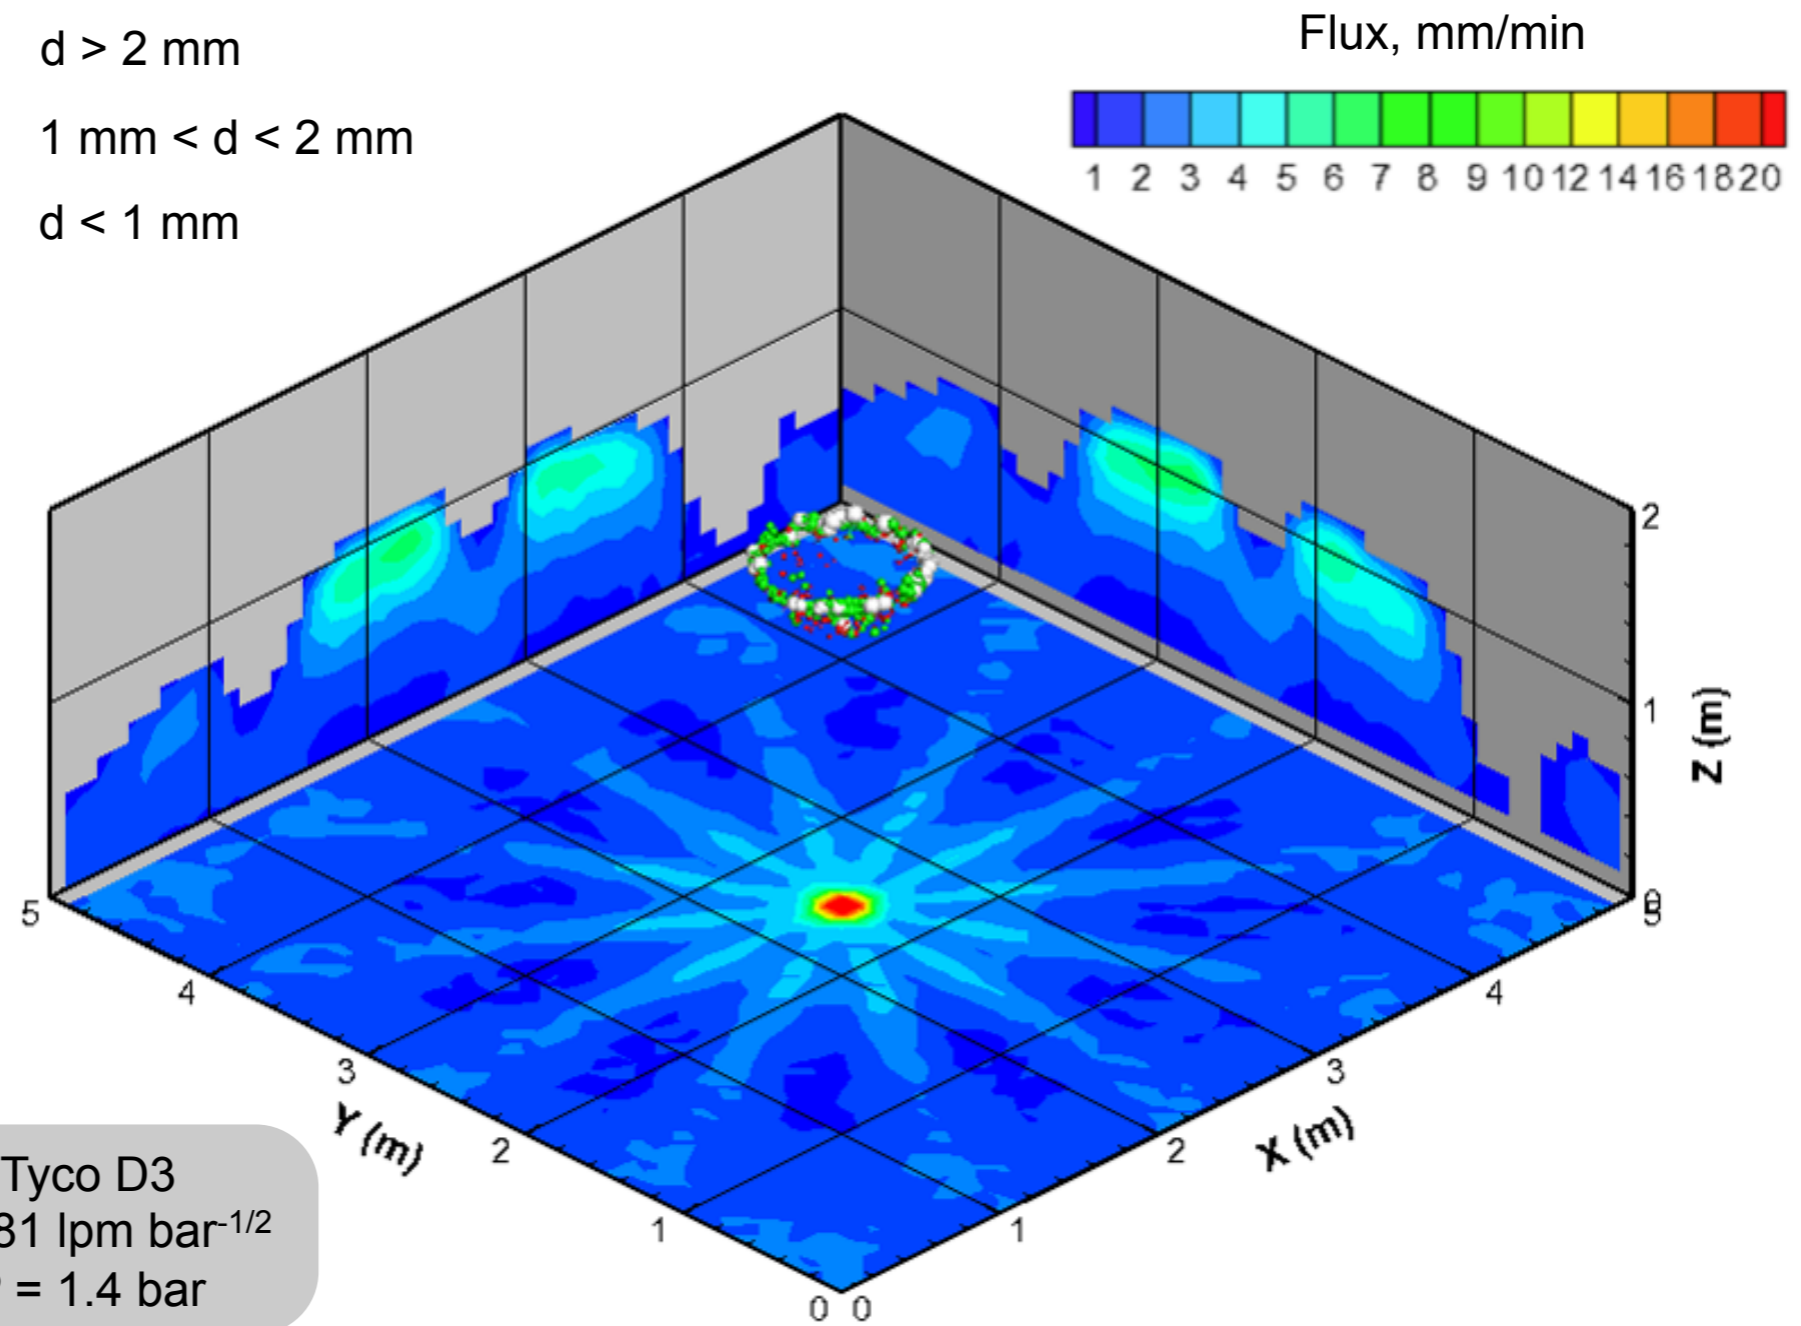

- **Introduction**
  - How do we quantify sprinkler sprays?
- **Objective**
  - Evaluate discharge characteristics through measurements
- **Measurements and Results**
  - **Stream** Formation
  - **Stream** Breakup
  - Initial **Spray**
  - Dispersed **Spray**
- **Summary**

A. JAMES CLARK  
SCHOOL OF ENGINEERING

# Introduction — Sprinkler Spray Example

-   $d > 2 \text{ mm}$
-   $1 \text{ mm} < d < 2 \text{ mm}$
-   $d < 1 \text{ mm}$

Tyco D3  
 $K = 81 \text{ lpm bar}^{-1/2}$   
 $P = 1.4 \text{ bar}$

# Introduction — Sprinkler Spray Characteristics

- How do we quantify sprinkler sprays?

## Spray Discharge

	Discharge Properties
$d_{v50}$ (mm)	2.1
$U_{inj}$ (m/s)	10.5
$\theta_{inj}$ (deg)	95
$q''$ (mm/min)	1.5
$r_{cov}$ (m)	4

## Drop by Drop

	$r$ (m)	$\theta$ (deg)	$\psi$ (deg)	$d$ (mm)	$u$ (m/s)
1	0.35	95	100	2.3	10.2
2	0.35	99	92	0.5	9.8
3	0.35	92	275	3.1	8.9
4	0.35	90	117	1.2	11.1
.....	.....	.....	.....	.....	.....
1,000,000	0.35	97	342	0.3	10.7

## Objective

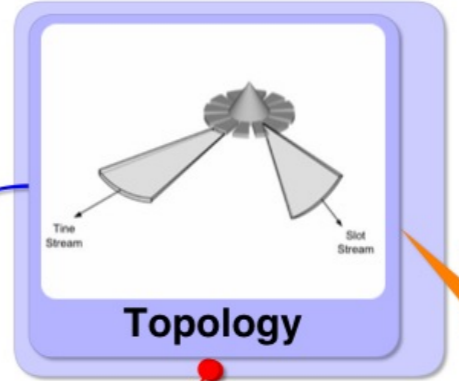

- **Evaluate discharge characteristics** from fire suppression devices from **measurements** to support CFD model and fire suppression product development (nozzle and system)

# Measurements – Overall Methodology

START  HERE!

**Understanding Sprinkler Discharge Characteristics**

Objective: Characterize the geometries and flow splits of the thin streams created by the sprinkler jet and deflector.

Objective: Establish method for computationally introducing measured or predicted initial drop location, size, and velocity and simulating interaction with the continuous phase.

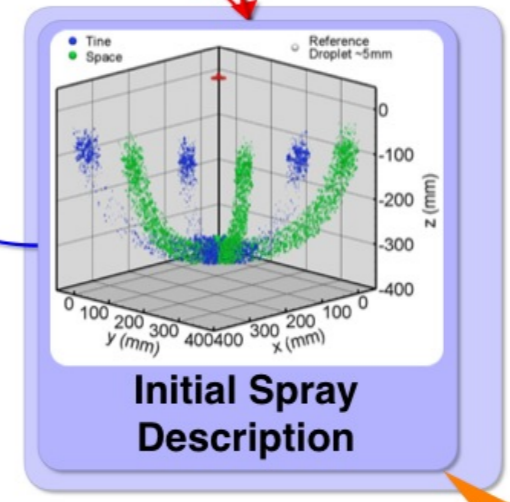

Objective: Develop a methodology and model to predict the initial spray from the fire sprinkler geometry and injection conditions.

Spatial Variation (Elevation Angle,  $\theta$ )

AVE	Volume Probability Density		Drop Size		Velocity		
	$L_{10}$	$L_{50}$	$D_{10}$	$D_{50}$	$v$		
$L_{10}$	0.004	0.0017	0.001	0.001	2.2		
$L_{50}$	0.008	0.004	0.002	0.002	2.4		
$D_{10}$	0.002	0.001	0.001	0.001	0.7		
$D_{50}$	0.004	0.002	0.002	0.002	0.7		
$v$	0.004	0.0017	0.001	0.001	2.2		
$\sigma$	0.008	0.004	0.002	0.002	2.4		
Shape	$L_{10}$	1.3	0.25	0.40	0.33	0.032	0.029
	$L_{50}$	0.85	-1.2	0.52	0.069	-0.31	-0.34
	$D_{10}$	0.067	0.33	0.59	0.68	0.45	0.24
	$D_{50}$	-0.78	0.76	-0.24	-0.048	-0.075	-0.032
	$v$	-0.11	-0.48	1.0	0.59	0.29	0.42

**Database**

Objective: Document spray characteristics from various fire sprinkler designs as to gain insight into the influence of geometry on injection conditions and for CFD spray initiation.

Objective: Characterize the initial spray from fire sprinklers.

# Approach – Stream Formation

## Planar Laser Induced Fluorescence (PLIF)

- Qualitative view of sheet topology.
- Difficulty measuring exact sheet thickness due to deflector surface reflections.
- High speed camera would provide breakup visualization.

## Results – Stream Formation

- Two distinct streams are formed.
- Flow split between these streams governs the sheet thickness and the resulting drop size

# Approach / Results – Stream Formation

## Short Time Exposure Photography

- Qualitative view of sheet topology

# Approach – Stream Breakup

## Short Time Exposure Photography

Canon 12-bit 3.4 Mpixel  
Digital SLR Camera

# Results – Stream Breakup

Ambient Condition

$$X_{sheet} = \frac{(\rho_a / \rho_l)^2}{f_o^2} (We / \beta^3 \gamma)$$

Injector Disturbances

Modified Weber Number

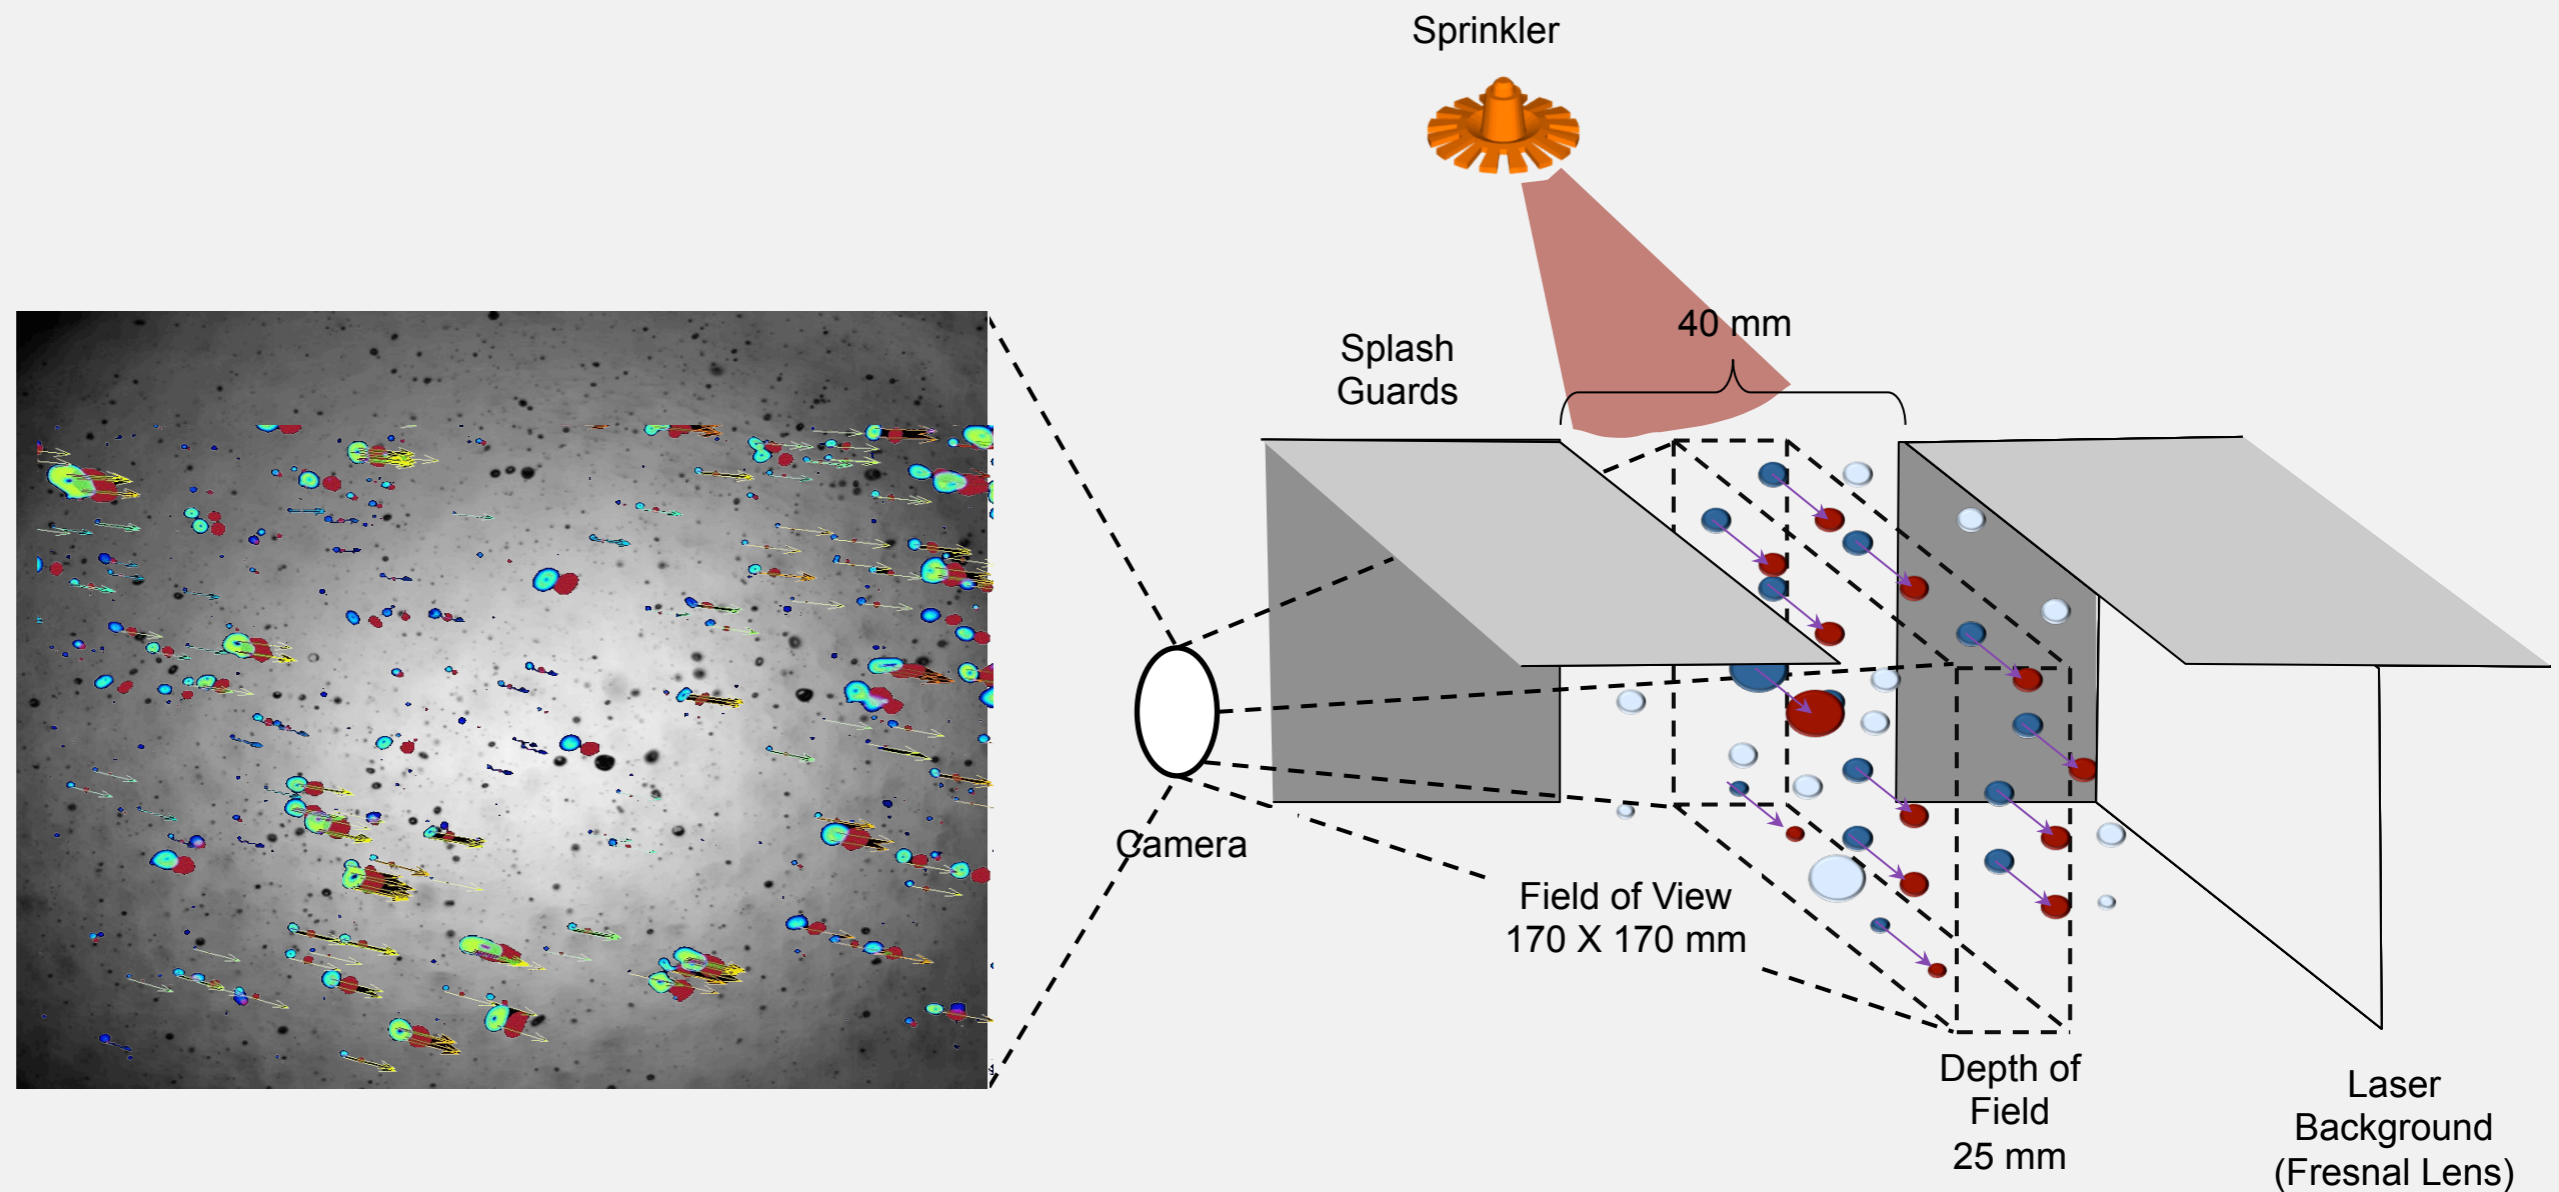

- $D_o=3.5\text{mm}$  } Basis Nozzles
- $D_o=6.7\text{mm}$  }
- $D_o=9.7\text{mm}$  }
- $D_o=6.35\text{mm}$  } Standard Nozzles (Tine)
- $D_o=12.7\text{mm}$  }
- ⊙  $D_o=6.35\text{mm}$  } Standard Nozzles (Slot)
- ⊙  $D_o=12.7\text{mm}$  }

# Approach – Initial Spray

## Shadowgraph/PTV (Drop Size/Velocity) Measurements

# Approach – Initial Spray

Area used: 150X150 mm

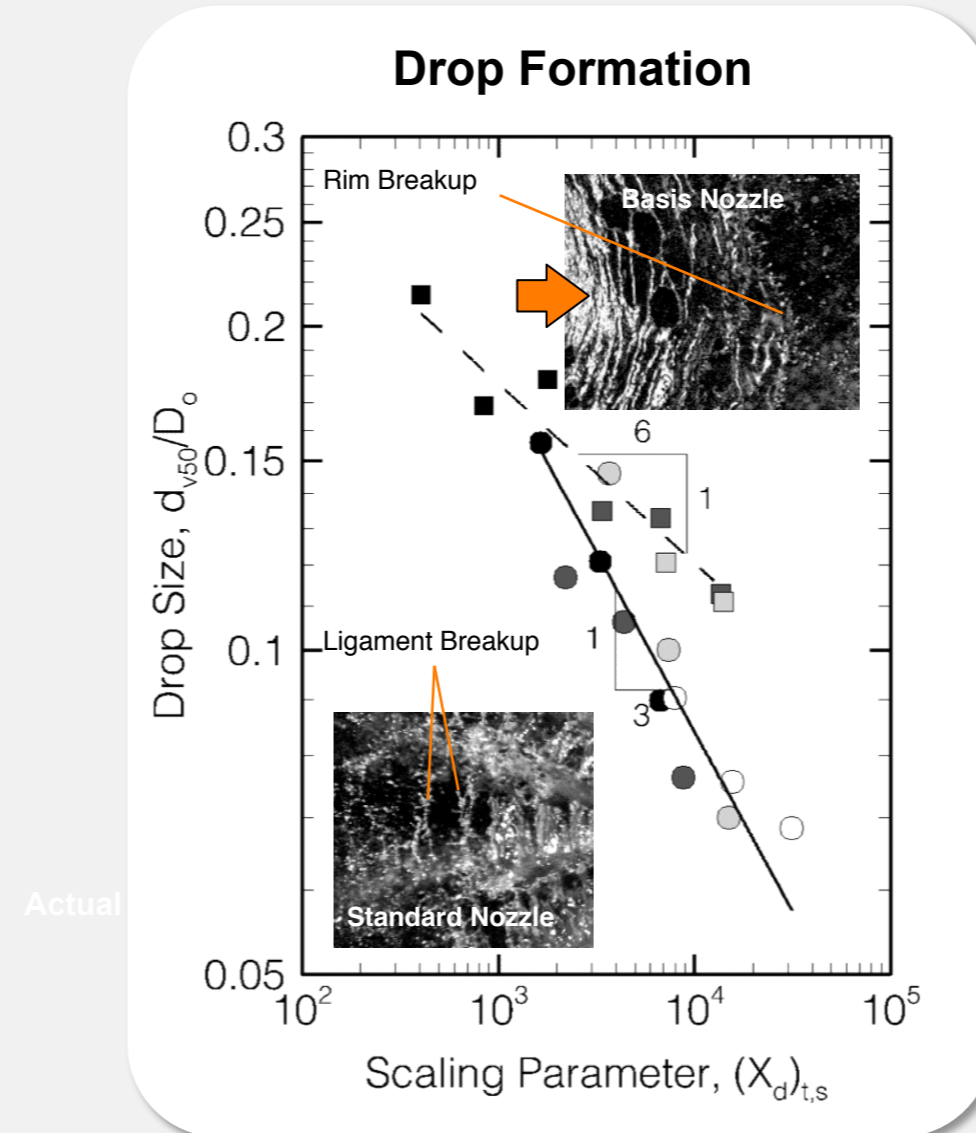

Image size: 170X170 mm

Minimum drop resolved: ~0.2mm

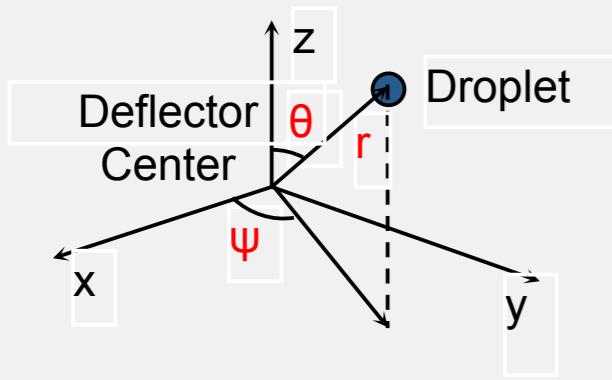

Std Nozzles (D3): ●  $D_o = 6.2$  mm - tine, ●  $D_o = 11.0$  mm - tine, ○  $D_o = 6.2$  mm - slot, ○  $D_o = 11.0$  mm - slot; Basis Nozzles: ■  $D_o = 3.2$  mm, ■  $D_o = 6.2$  mm, □  $D_o = 9.5$  mm

# Results – Initial Spray

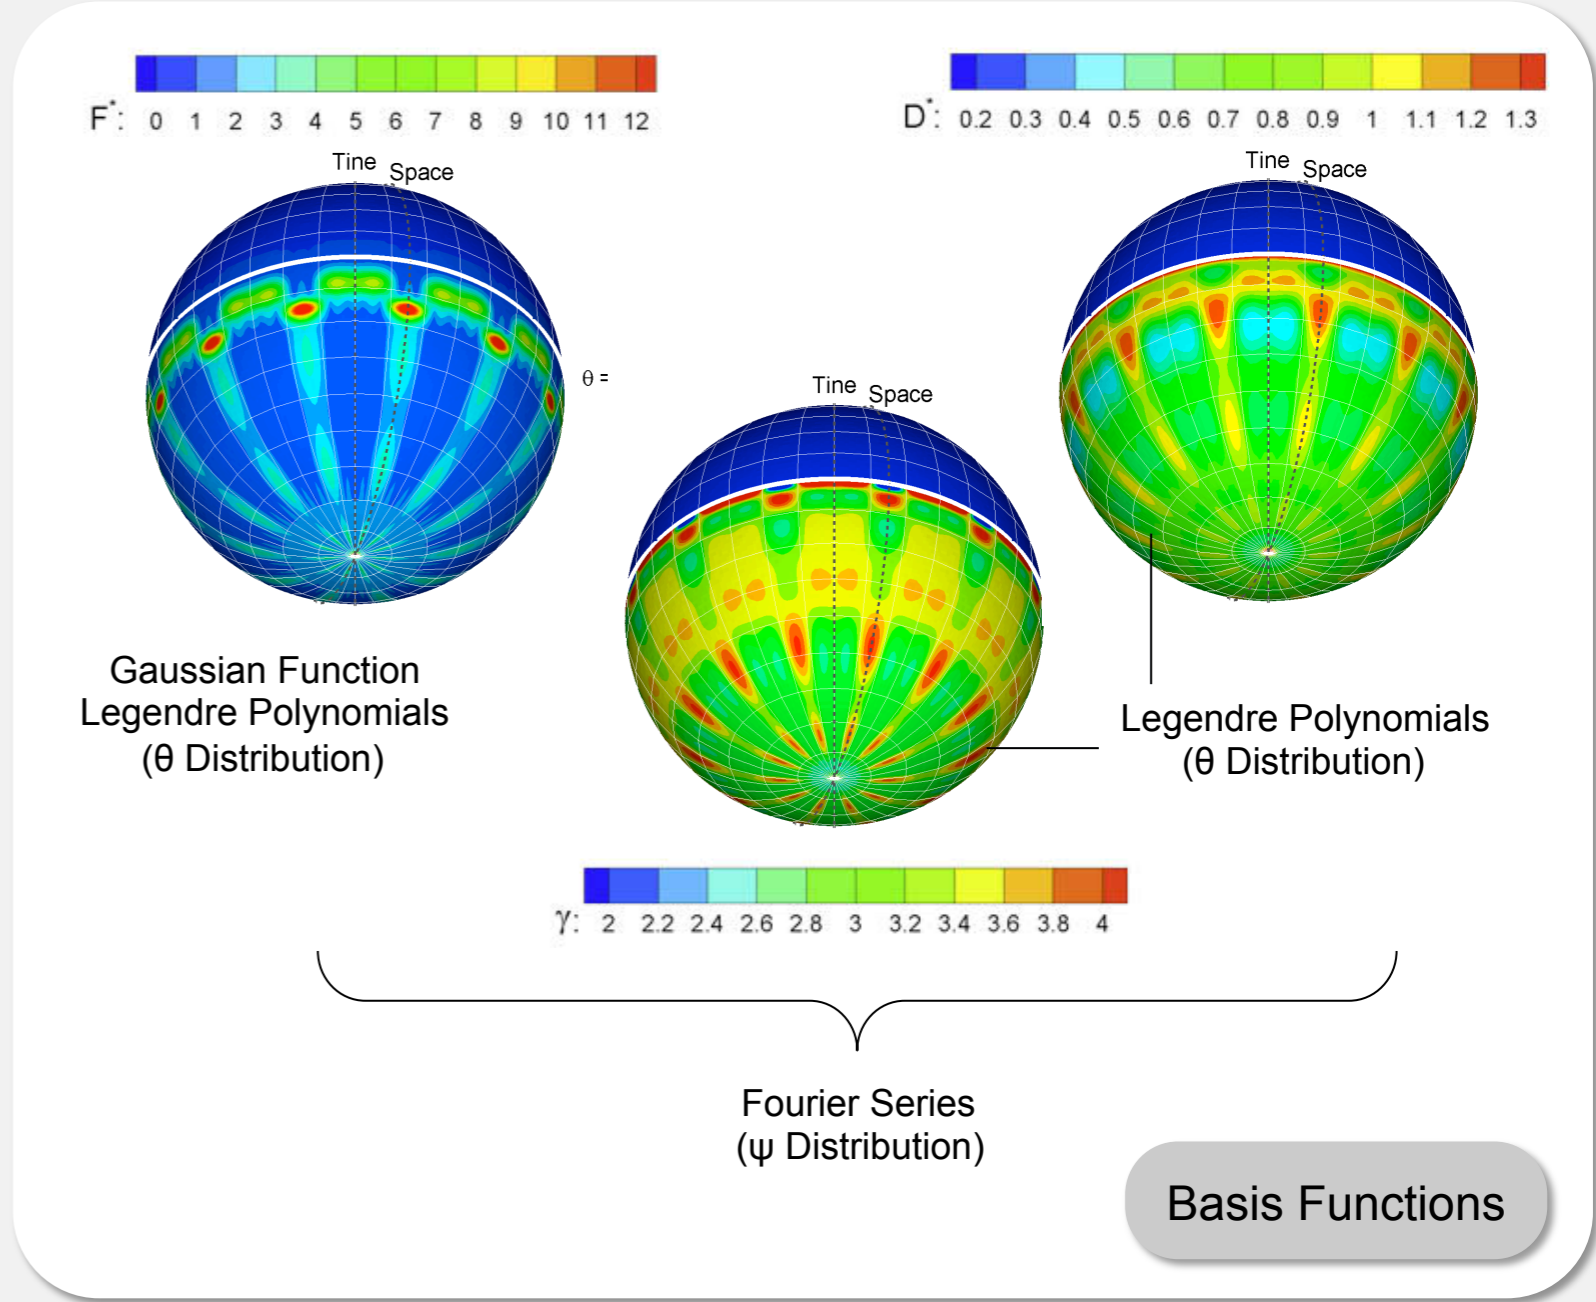

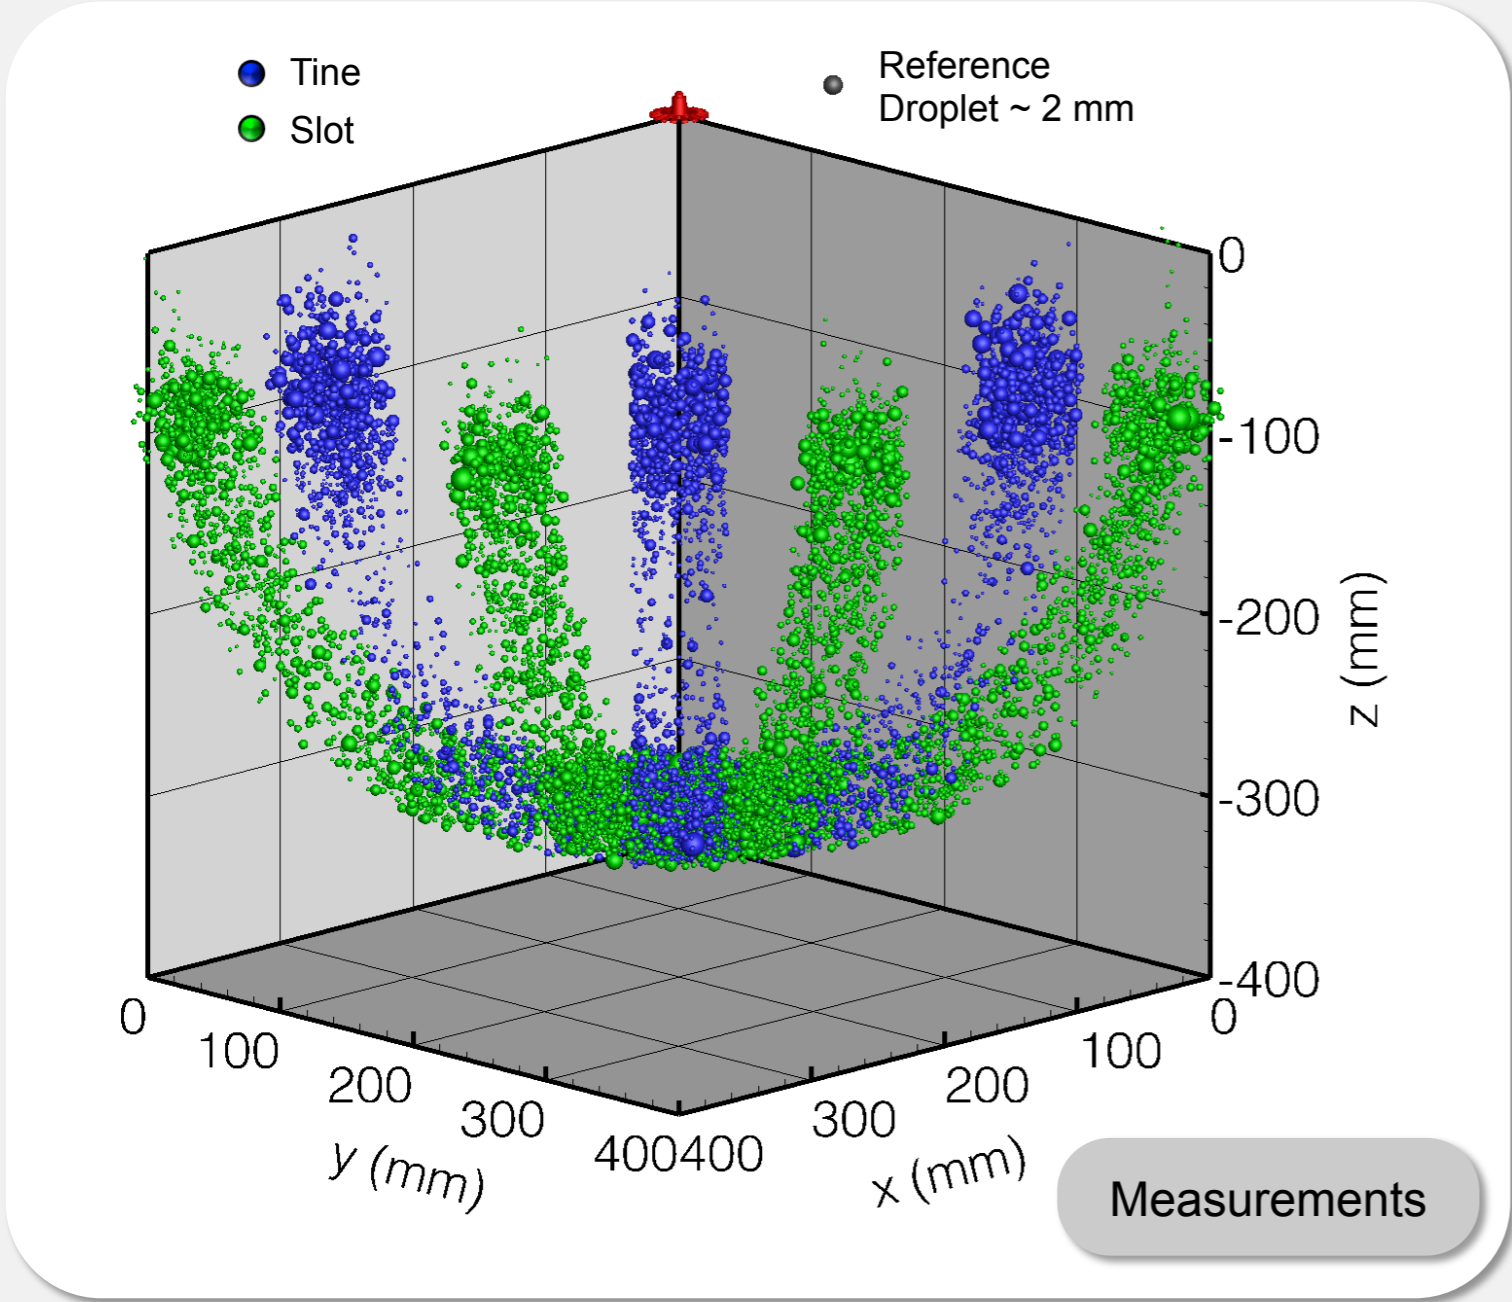

$$X_{drop} = (\rho_a / \rho_l)^{1/2} f_o(We / \beta^3 \gamma)$$

# Results – Initial Spray Description

Tyco D3  
 $K = 81 \text{ lpm bar}^{-1/2}$   
 $P = 1.4 \text{ bar}$

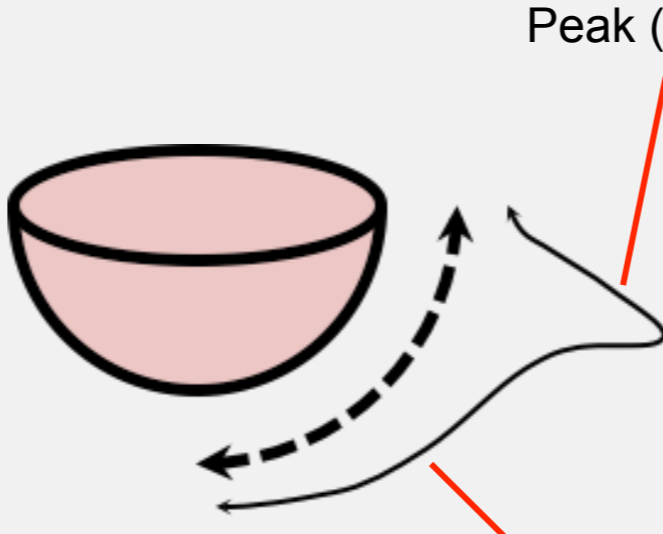

Ren, N., Baum, H., & Marshall, A., "A comprehensive methodology for characterizing sprinkler sprays," *Proceedings of the Combustion Institute*, 2010, pp. 2547–2554

# Results – Initial Spray

Tyco D3  
 $K = 81 \text{ lpm bar}^{-1/2}$   
 $P = 1.4 \text{ bar}$

## Sprinkler Discharge

- Physically rational compact description of spray.
- Provides a framework for spray evaluation and insight.
- **48** coefficients describe (and can generate) the 3D stochastic spray.
- **15** first order coefficients describe primary spray characteristics.

Peak (Gaussian)

		Volume Probability Density (for location)		Drop Size				Velocity		
		$f_V(\theta   \psi_{t,s})$		$d_{v50} / D_o$ $D_o = 11 \text{ mm}$		$\Gamma$ (distribution width)		$u / U$ $U = 15 \text{ m/s}$		
		$t$	$s$	$t$	$s$	$t$	$s$	$t$	$s$	
Avg.	$L_0$	0.004	0.007	0.11	0.10	2.9	2.8	0.62

Table (Legendre)

# Results – Initial Spray

Tyco D3  
K = 81 lpm bar<sup>-1/2</sup>  
P = 1.4 bar

		Fourier Coefficients
Shape	$a_0$	1.333
	$a_1$	0.551
	$a_2$	-0.276

Volume Probability Density (for location)		
$f_v(\psi_{t,s})$		
		$s$
Shape	$t$	
	0.0029	0.0025

$$f_v(\psi_s) / f_v(\psi_t) = 0.86$$

# Approach – Dispersed Spray

## Malvern Drop Size Measurements

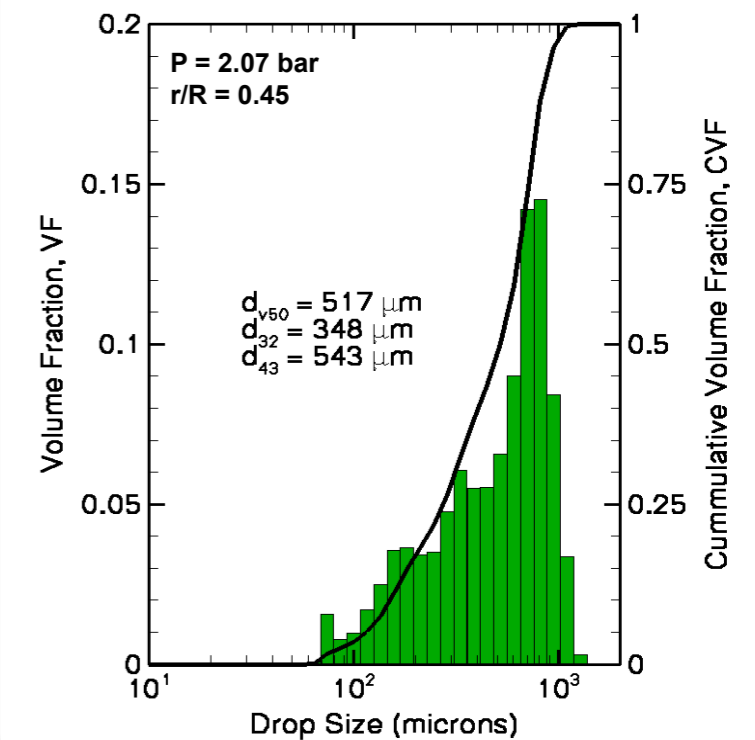

### Malvern Spraytec Analyzer (Light Diffraction Technique)

### Local Measurements

### Local Drop Size Distribution

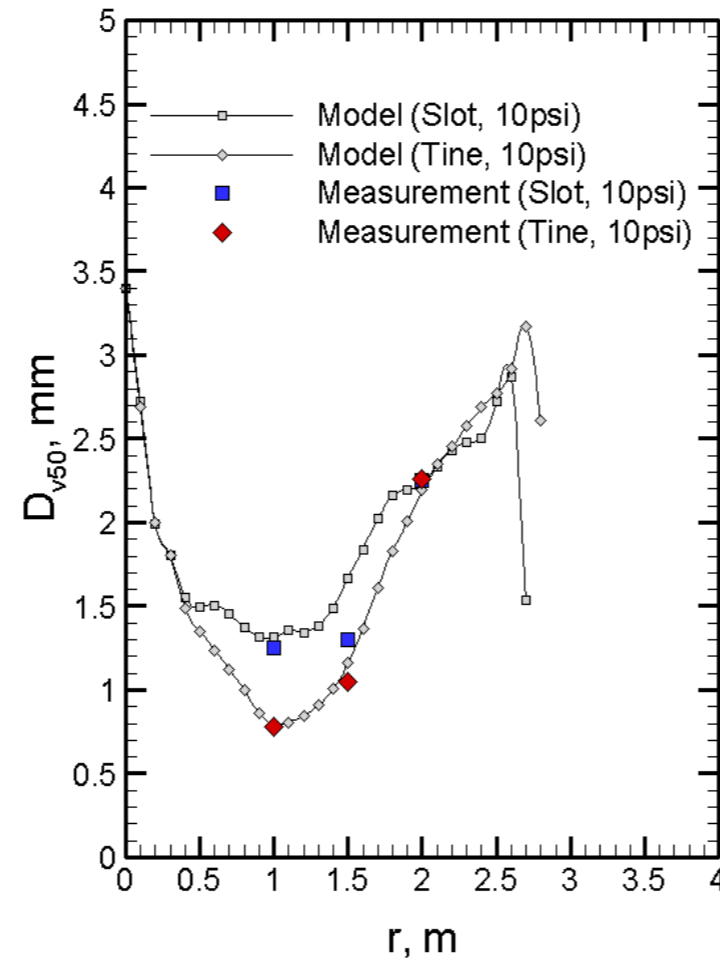

- Drop size limit (~ 0.8 mm)

# Results – Drop Size Comparison

Tyco D3  
 $K = 81 \text{ lpm bar}^{-1/2}$

P = 0.7 bar

P = 1.4 bar

# Approach – Dispersed Spray

## Volume Flux Measurements

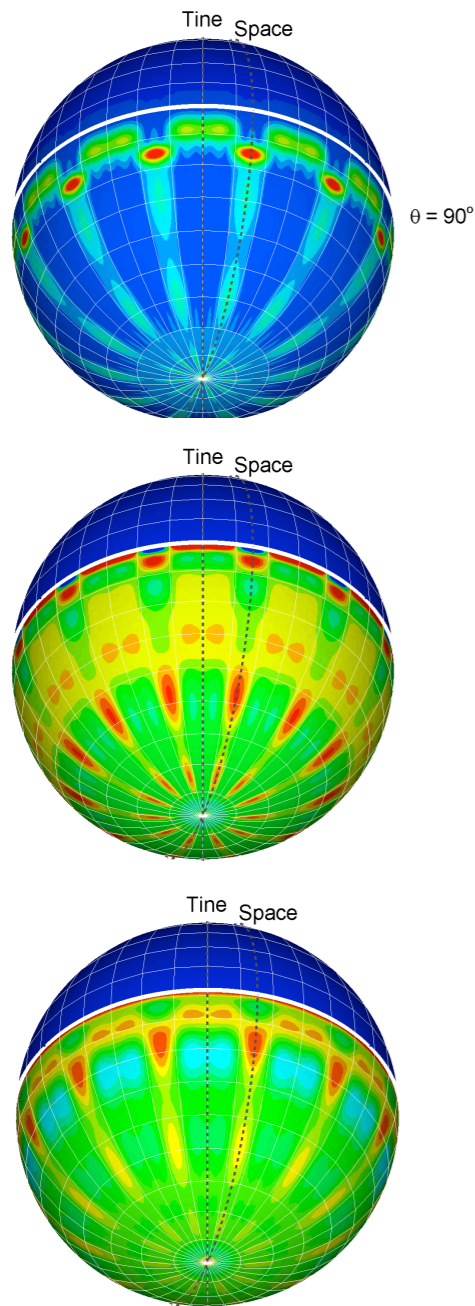

Tyco D3  
 $K = 81 \text{ lpm bar}^{-1/2}$   
 $P = 1.4 \text{ bar}$   
 $2.9 \text{ mm/min}$

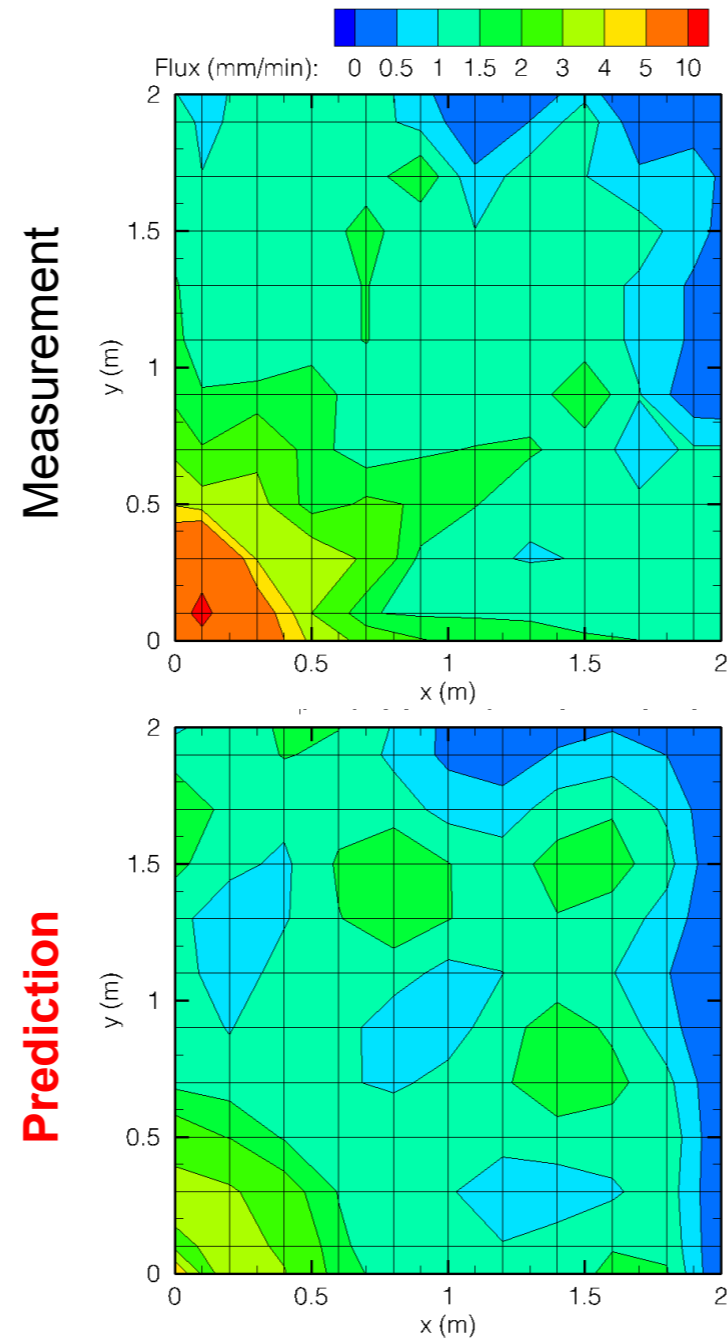

# Results – Dispersed Spray

## Initiation Sphere

## Patternation (z= -1 m)

## Summary

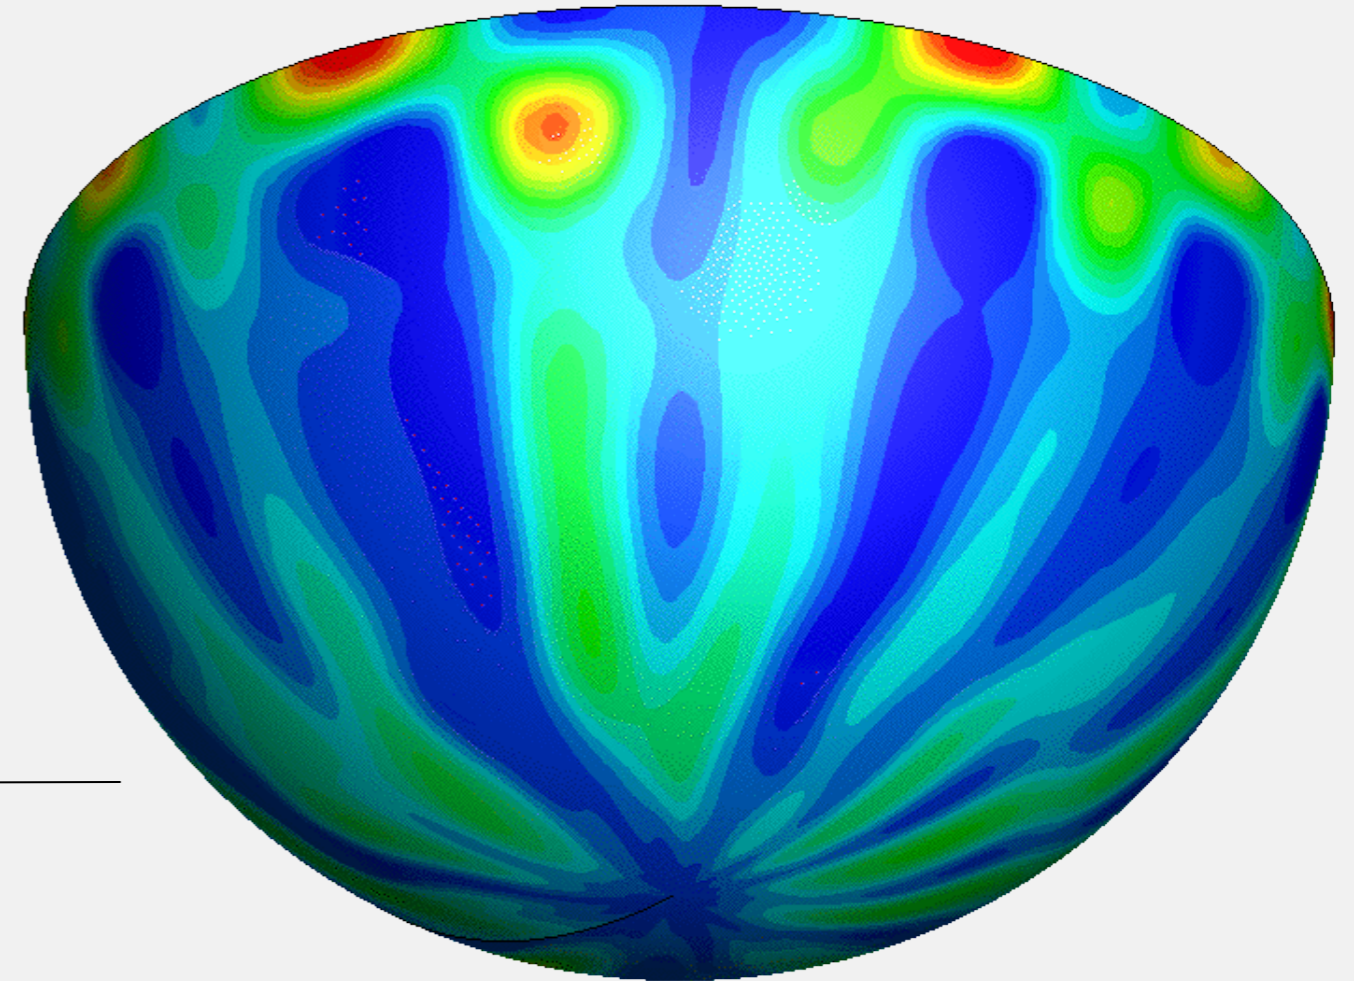

- Focused measurements provide insight into the discharge characteristics of sprinkler sprays.
- Qualitative and quantitative measurement methods are available to explore sprinkler spray behavior from stream formation to the dispersed spray.
- These measurements provide insight into basic features of the spray (images/comprehensive framework), relationship with nozzle geometry (scaling laws), CFD modeling input (detailed measurements), and suppression performance (volume flux measurements).

# Future Work - Measurements

Tyco D3  
 $K = 81 \text{ lpm bar}^{-1/2}$   
 $P = 0.7 \text{ bar}$
